Jamestown, NC 27282

Dear Harry,

I just wanted to let you know how pleased we have been with your HVAC system over the past 12 years and give you an update on its performance. The system continues to provide a comfortable, uniform temperature in any season of the year along with very significant energy savings. In a check of energy consumption for the past three years our 2170 square foot home has averaged approximately \$27 per month for heating and cooling!

Specifically, the system consumed 15,599KW from 1-31-99 until 3-30-02 (38 months), and at 6.5 cents per KW, the average is \$26.68 per month.

Your HVAC system, along with Debbie Rucker Coleman's passive solar design, continues to perform wonderfully and has saved us a tremendous amount of energy and cost since 1990.

Sincerely,

Gordon Plumblee

c: Debbie Coleman

Debbie, I had time to check on the KW rate and we are on REZ, which is 6 1/2¢ per KW. So the figures are even better than we thought. Thanks, Gordon
